

SANIA JAMEEL

Chichawatni, Pakistan | saniajameel686@gmail.com | +92 312 4404886
github.com/sania-builds

PROFILE

Computer Science graduate with hands-on experience building AI and machine learning projects in Python, including document retrieval chatbots, deep learning models, and multi agent systems. Comfortable working across the full build cycle, from data handling and model integration to building usable interfaces with Streamlit. Eager to bring this foundation to an entry level software or AI development role.

EDUCATION

BS Computer Science — Virtual University of Pakistan

Intermediate (I.C.S) — Fatima Jinnah College, Lahore

Matriculation — Monami Montessori & High School, Lahore

SKILLS

Programming: Python

Python libraries: LangChain, FAISS, Sentence Transformers, Streamlit, TensorFlow / Keras, pandas, NumPy

AI tools & platforms: Groq, Ollama, Hugging Face, Jupyter Notebook

Office tools: Microsoft Excel, Microsoft Word, Microsoft PowerPoint

PROJECTS

Document Chat Assistant

Python, LangChain, FAISS, Groq, Streamlit | github.com/sania-builds/document-chat-assistant

- Built a Python chatbot that lets users upload PDF, DOCX, or TXT files and ask questions about their content in plain language.
- Implemented text chunking and embeddings, and stored them in a FAISS vector database for fast similarity search.
- Built a conversational retrieval chain that keeps chat history so follow up questions stay in context.
- Designed an interactive Streamlit interface for uploading files and chatting in real time.

Rice Plant Disease Detection

Python, Deep Learning, TensorFlow / Keras | github.com/sania-builds/Rice-Plant-Disease-Detection

- Developed a deep learning based image classification system to detect diseases in rice plant leaves.
- Trained and evaluated a convolutional neural network on a labeled leaf image dataset to help identify problems early.
- Documented the project with a full report and presentation covering methodology and results.

Clothing Brand AI Sales Team

Python, Ollama, SQLite, Streamlit, Multi Agent AI | github.com/sania-builds/clothing-brand-ai-sales-team

- Designed a multi agent AI system for a clothing brand, coordinating three specialized agents.
- Built a sales agent to handle customer chat, a data agent to track sales and inventory, and a marketing agent to generate promotional posts.
- Used SQLite for data storage and Streamlit for the user interface, with local AI inference through Ollama.
